Does the Woman Exist? Paul Verhegna 2013-04-16 This book describes how Freud attempted to chart hysteria, yet came to a standpoint at the problem of women and her desire, and of how Lacan continued along this read by creating new conceptual tools. The difficulties and upsets encountered by both men are examined. This book provides a presentation of the concept of ‘Lacan à la carte’ in our social fabric. Patently and carefully, Verhegna applies the Lacanian grid to Freud’s text and succeeds in explaining Lacan’s formulations without merely recapitulating his theories.

Do Options Exist? Cato Salome Sollom 2010 No decree, state referendum, or international organization can abolish a woman’s right to develop individually within her internal world and to build her own psychic means for self-determination. Nothing and no one can stop a woman who, due to her own development, has become completely emancipated from the discrimination she faced previously, and has become equal to all by her own decree, not because of an externally ordained special law. “Women are not women”, as Sartre has written, “they are only the political power to assert the existence of politics and all the problems and difficulties that show up in life. The author encourages women to ready themselves to become the mothers of the world and the creators of change for all humanity.

Sovereignty, Knowledge, Law-Pawe Minkkinen 2019-02-07 Sovereignty, Knowledge, Law investigates the notion of sovereignty from three different, but related perspectives: as a legal concept in relation to the sovereign state, as a political concept in relation to sovereign power, and as a metaphysical question in relation to sovereign self-knowledge.

The varied and interchangeable uses of legal sovereignty, political sovereignty and metaphysical sovereignty in contemporary debates have resulted in a situation where the word “sovereignty” itself has become something of a non-concept. Pawe Minkkinen shows here how these three perspectives have informed one another, by addressing their shared relationship to law, and to the “autocephalous” function of sovereignty; that is, the attempt to provide a simple source and foundation for law, power, and self-knowledge. Through an effort to domesticate the intrinsically ‘heterocephalous’ nature of power, the juridical and jurisprudential aim has been to confine power within a closed vertical hierarchy of traditional legal thinking. Sovereignty, Knowledge, Law thus elaborates this heterocephaly, adds new perspectives of understanding sovereignty, as well as of law and of legal scholarship.

Empowering Measurement in Practice-Ruth Altop 2015-02-08 “Empowerment” is a much debated concept, with many different definitions and interpretations. In this paper, we present a framework for measuring empowerment and its structure.

The paper begins by examining the empirical evidence that supports the existence of a relationship between empowerment and various outcomes, both personal and social. Our findings suggest that empowerment is a complex and multifaceted concept, with different dimensions and levels.

In the second part of the paper, we discuss the various measurement tools and techniques that can be used to assess empowerment. We present a set of indicators that can be used to measure empowerment at different levels, from the individual to the community.

We also discuss the potential advantages and limitations of different measurement approaches.

Finally, we provide a set of recommendations for future research and policy making, based on our findings and the current state of the art.

Empowerment is defined as a person’s capacity to make effective choices—that is, the capacity to transform choices into desired actions and outcomes. The extent or degree to which a person is empowered is influenced by personal agency (the capacity to make purposive choice) and opportunity structure (the institutional context in which choice is made). The opportunities used as indicators of agency.
